Data Modelling and Form Design for a Business Application in Zoho Creator

Aim

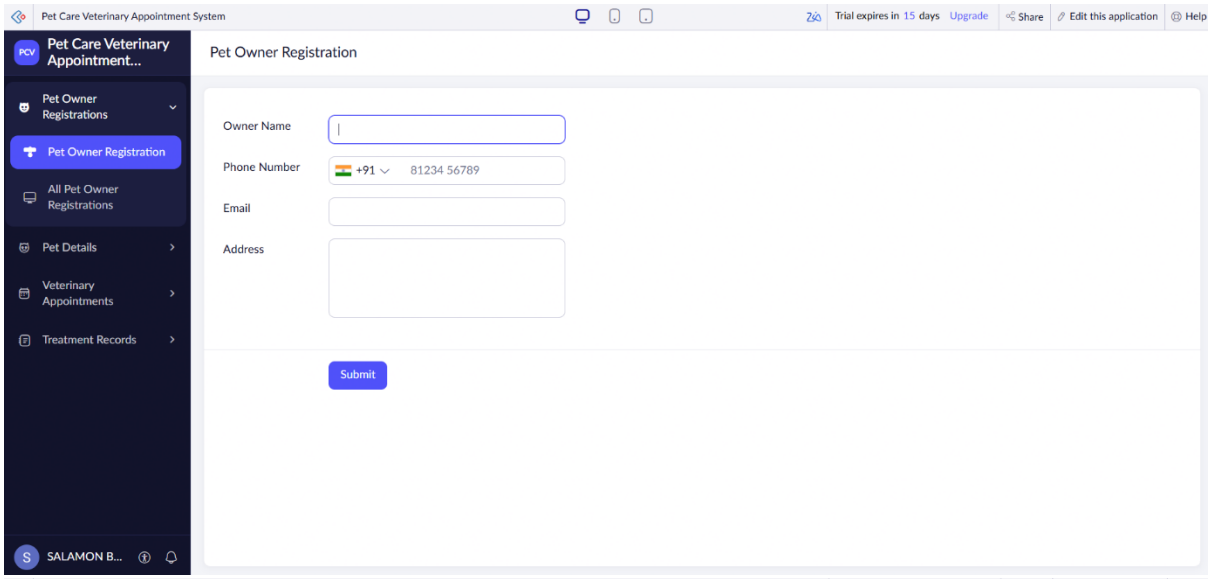

To design a business application using Zoho Creator by creating forms, defining appropriate fields and data types, establishing relationships between forms, and automating business processes using workflows.

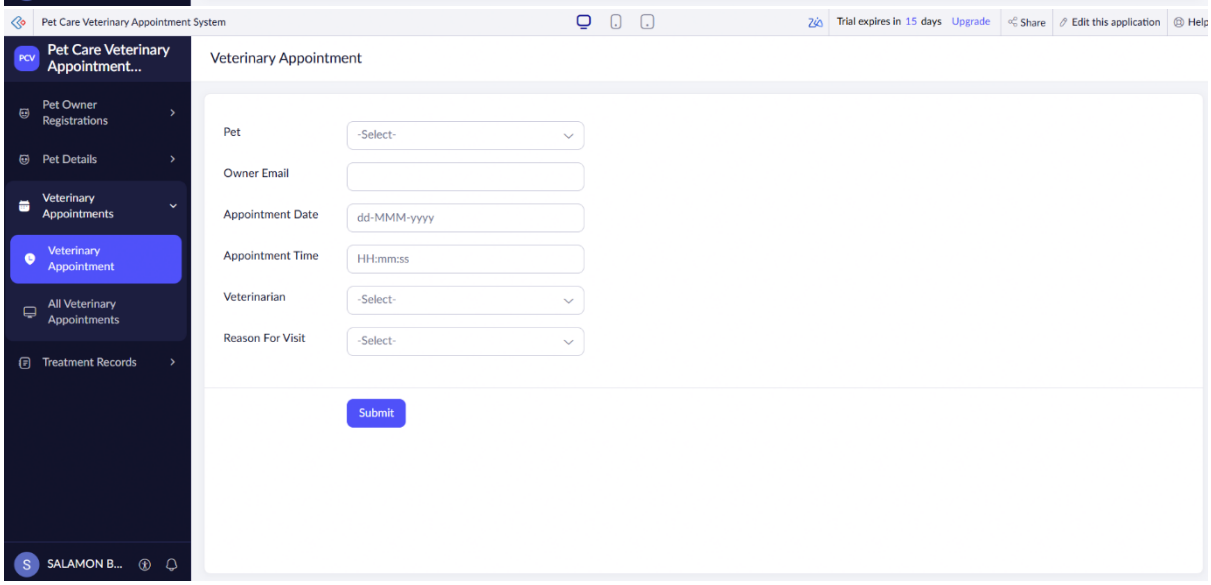

Procedure

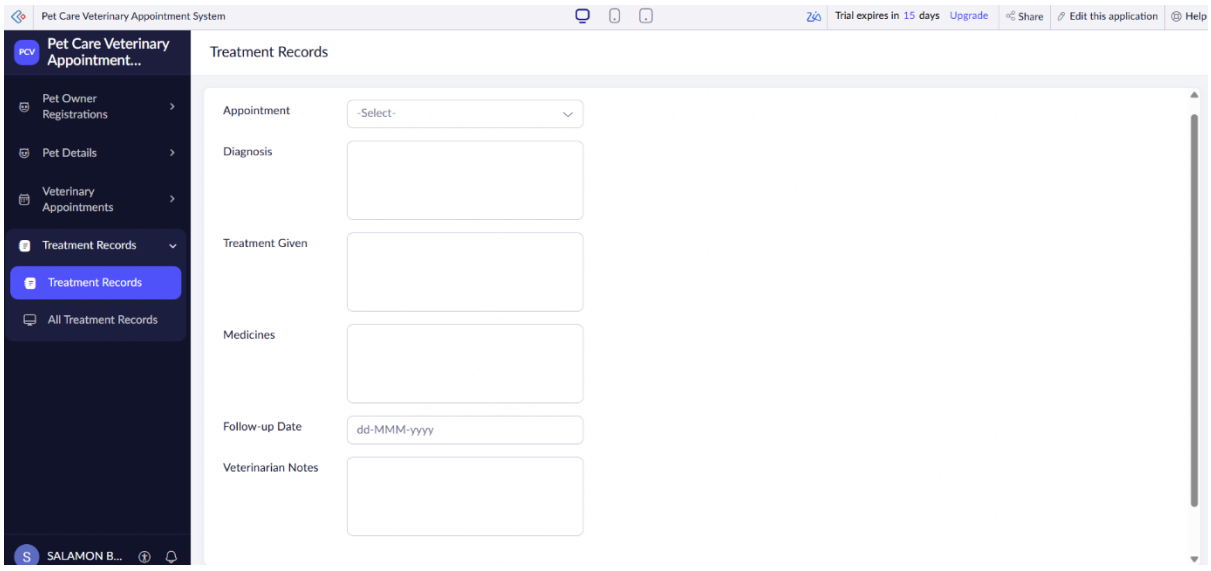

1. Log in to the Zoho Creator platform.
2. Create a new application named Gym Membership Management System.
3. Create a Member Registration form with fields such as Member Name, Member ID, Phone Number, Email, Gender, and Address.
4. Create a Membership Plan form with fields such as Plan Name, Duration, Membership Fee, and Benefits.
5. Create a Membership Details form with fields such as Member, Plan, Start Date, End Date, and Payment Status.
6. Use Lookup fields to establish relationships between the member, membership plan, and membership details forms.
7. Configure field properties, mandatory fields, and dropdown options.
8. Create a workflow using Deluge scripting to calculate the membership end date automatically.

9. Save the application and enter sample data to test the forms.
10. Verify the stored records and ensure that the workflow functions correctly.

Result

Thus, the data modelling and form design for the Gym Membership Management System were successfully completed using Zoho Creator. The forms were designed with appropriate fields and data types, and relationships were established using Lookup fields. A workflow was configured to automate membership end-date calculation, reducing manual effort and improving data accuracy. The application provides an organized and efficient method for managing gym members, membership plans, and subscription details.
