Building Reports, Dashboards, and Custom Pages Using UI Builder

Aim

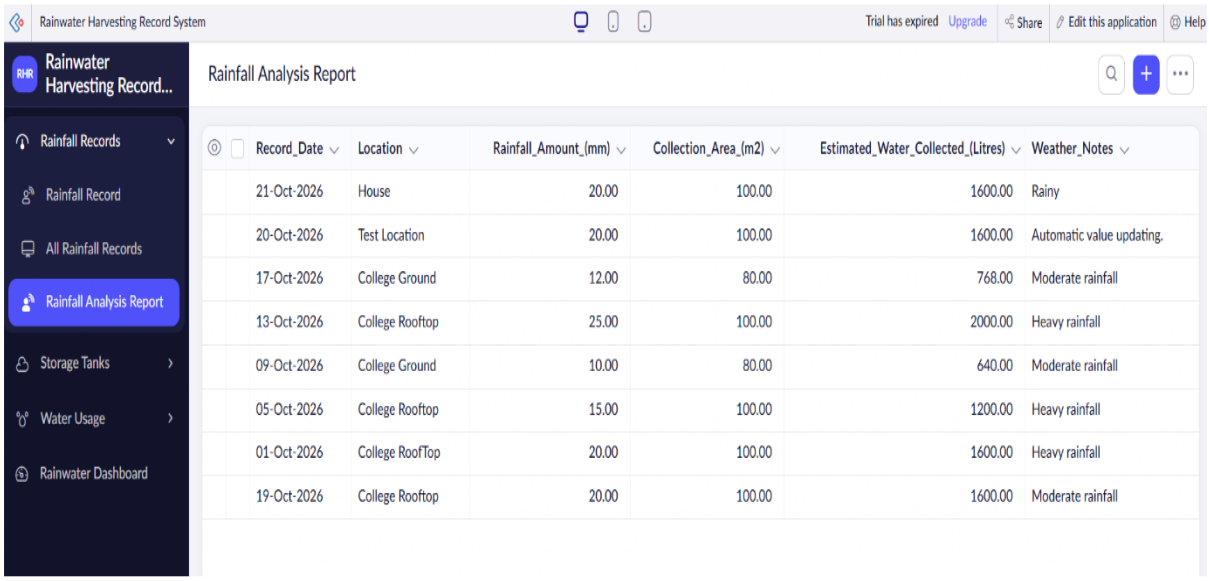

To build reports, interactive dashboards, and customized pages using the UI Builder in Zoho Creator to present business data in a clear, organized, and user-friendly manner.

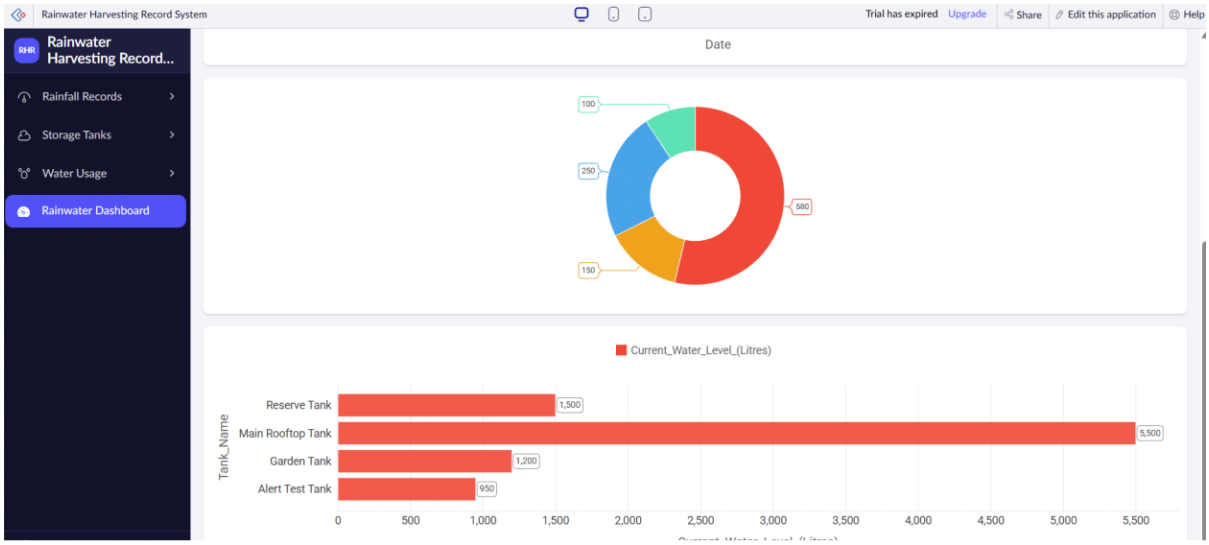

Procedure

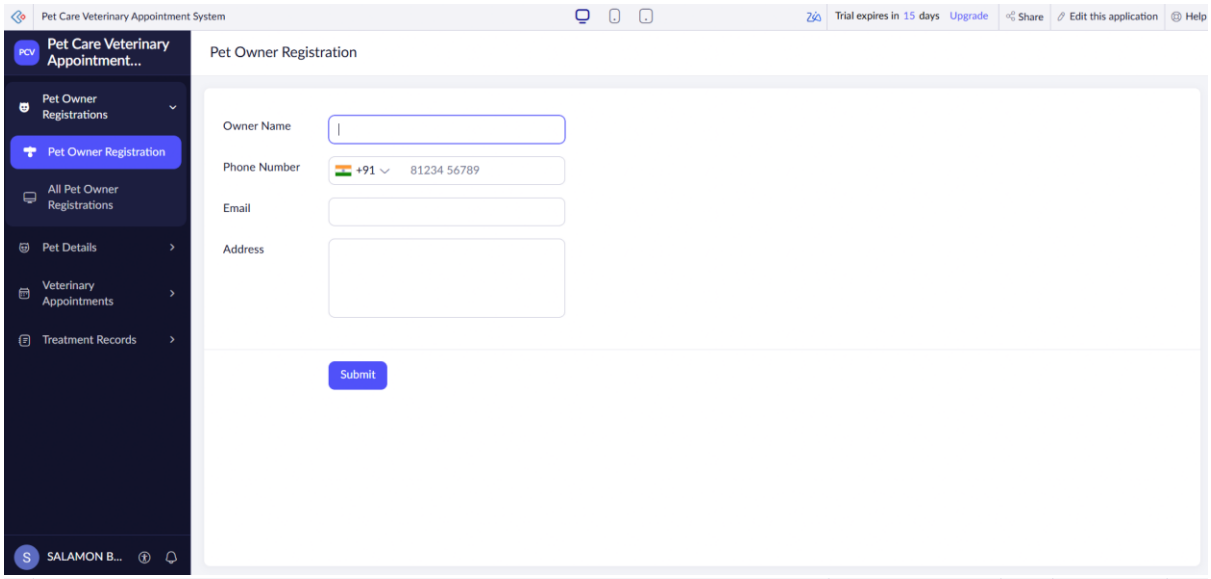

1. Log in to the Zoho Creator platform using valid credentials.
2. Open the existing Gym Membership Management System application.
3. Navigate to the Reports section and create reports using the Member Registration and Membership Details forms.
4. Configure reports to display member names, contact details, membership plans, start dates, end dates, and payment status.
5. Apply filters and sorting options to view active memberships, expired memberships, and pending payments.
6. Navigate to the Pages section and create a new dashboard page using the available page-building components.
7. Add charts, summary panels, tables, and other visual components to represent membership information.

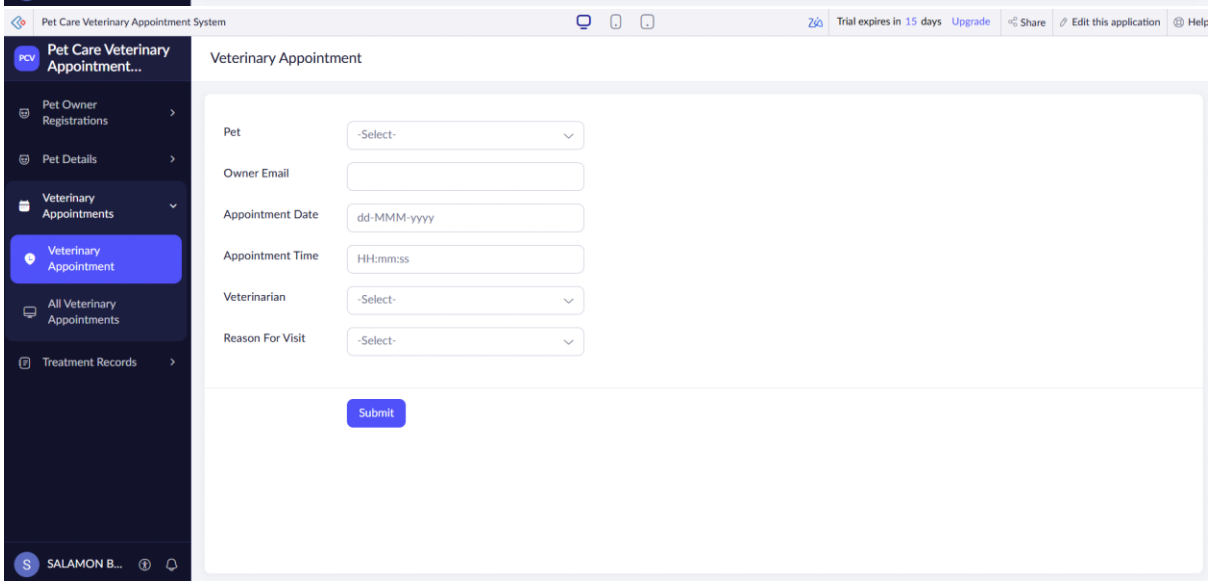

8. Configure charts to display total members, membership plan distribution, and payment status.
9. Use the UI Builder to arrange the components and customize the page layout, colors, headings, and labels.
10. Create custom pages to provide easy navigation between member registration, membership reports, and dashboard views.
11. Save and preview the reports, dashboards, and custom pages to verify their appearance and functionality.
12. Test the application to ensure that the displayed information is accurate and the interface is user-friendly.

Result

Thus, reports, dashboards, and custom pages were successfully created using the UI Builder in Zoho Creator. Reports were configured to display and organize gym membership information, allowing users to view member records, active and expired memberships, and payment details efficiently.

Dashboards were designed using visual components such as charts, summary panels, and tables to provide a clear overview of gym operations. These visualizations help users understand membership distribution, monitor payment status, and identify important business information quickly.

Custom pages were created to improve navigation and provide a structured interface for accessing different application features. The layout and components were arranged to make the application more attractive, accessible, and easy to use.

The implementation demonstrates how UI Builder can be used to transform business data into meaningful reports and visual dashboards. It improves data presentation, supports efficient monitoring, reduces the effort required to analyze records, and helps users make informed decisions. Therefore, the Gym Membership Management System provides an organized and user-friendly environment for managing membership information and monitoring overall gym activities.
