Workflow by Deluge Scripting in Zoho Creator

Aim

To create and configure workflows in Zoho Creator using Deluge scripting to automate business processes, perform calculations, update form fields automatically, and improve the efficiency of the Gym Membership Management System.

Procedure

1. Log in to the Zoho Creator platform using valid credentials.
2. Open the existing Gym Membership Management System application.
3. Create a form named Membership Details with fields such as Member Name, Membership Plan, Start Date, End Date, and Payment Status.
4. Navigate to the Workflow section in the application builder.
5. Click Create Workflow and select the Membership Details form.
6. Configure the workflow trigger, such as when a record is created or when a user enters a field value.
7. Select Deluge Script as the workflow action.
8. Enter a Deluge script to calculate the membership end date automatically based on the selected duration.
9. Save the workflow and ensure that the field link names in the script match the actual form fields.

10. Test the workflow by entering a new membership record and selecting a start date and membership duration.
11. Verify that the end date is calculated automatically and that the record is saved correctly.
12. Modify and test the workflow as needed to ensure that the automation works properly.

Deluge Code

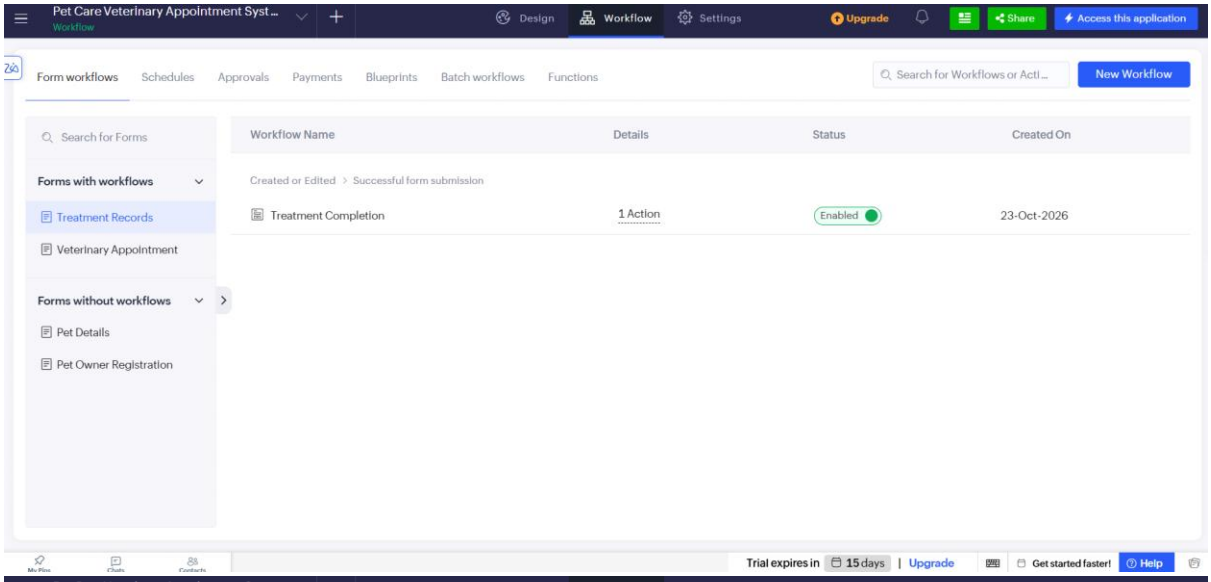

The following script calculates the membership end date for a one-month membership.

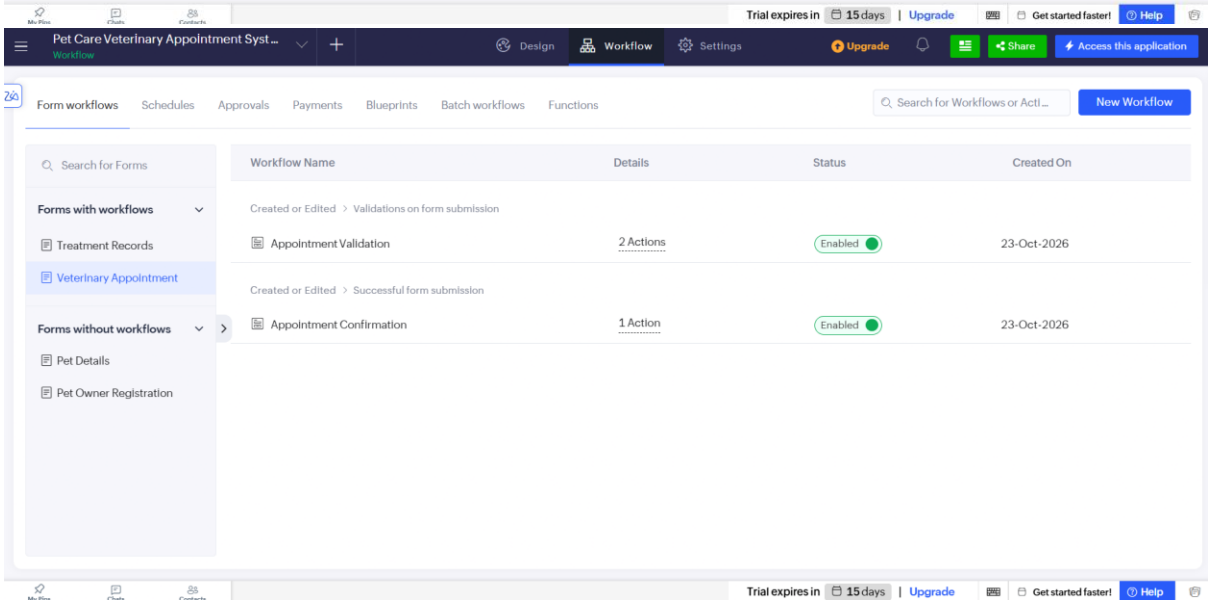

Assumed field link names: Start_Date and End_Date.

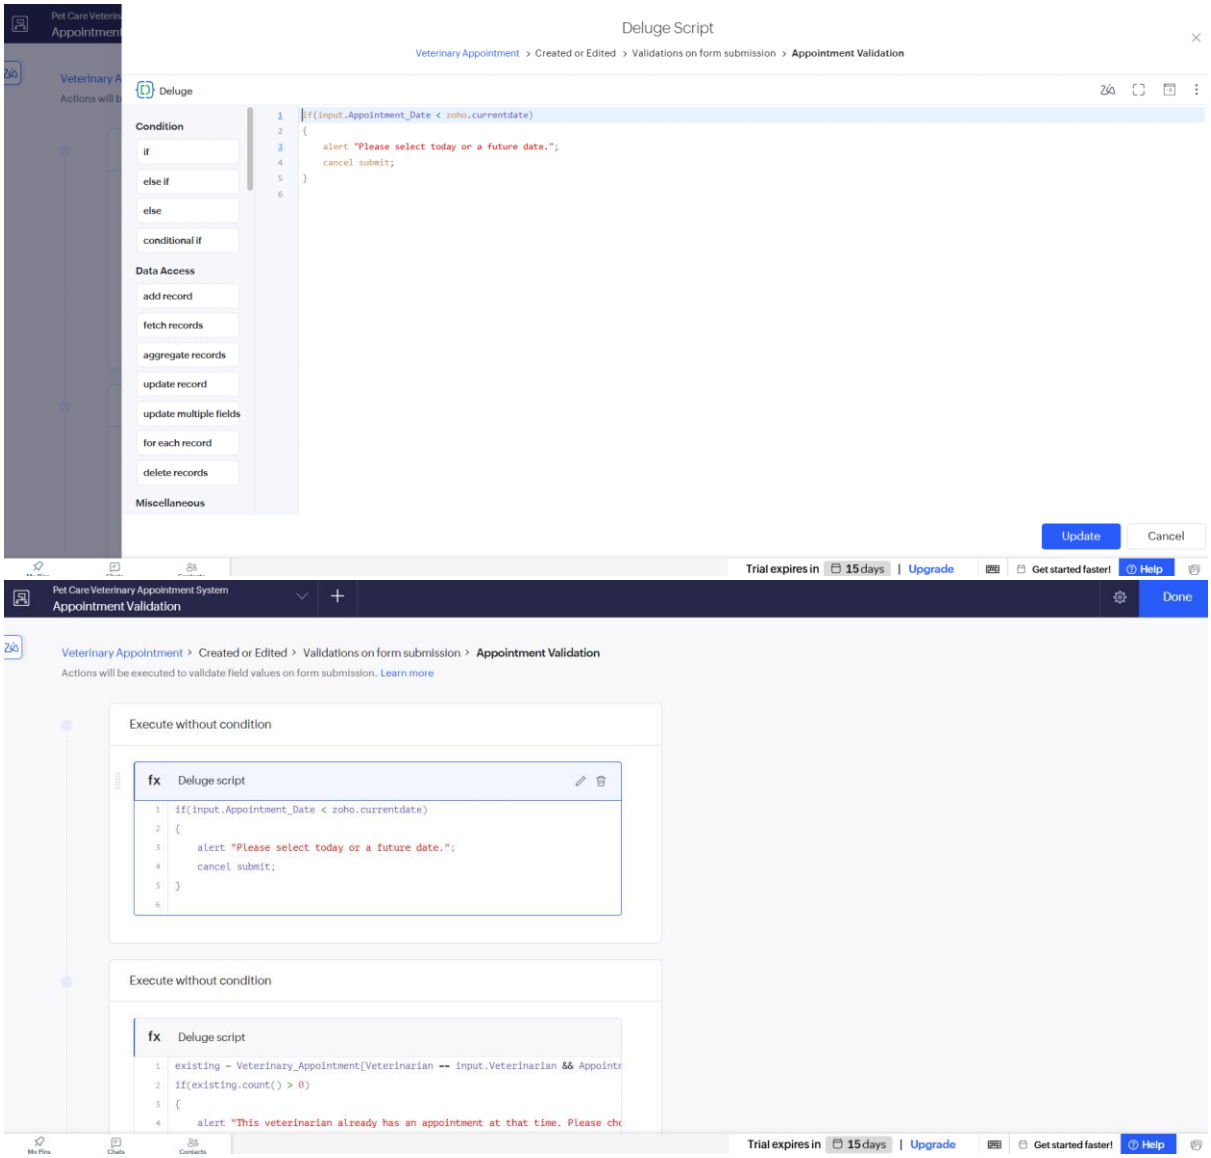

```
if(input.Start_Date != null)
{
   input.End_Date = input.Start_Date.addMonth(1);
}
```

Note: Configure the workflow for the appropriate form event, such as On User Input for Start_Date. Replace the sample field link names if your form uses different ones.

Result

Thus, a workflow was successfully designed using Deluge scripting in Zoho Creator for the Gym Membership Management System. The workflow automatically calculates the membership end date based on the start date, reducing manual calculations and minimizing data-entry errors.

The implementation demonstrates how Deluge scripting can automate repetitive business operations, validate data, and update form fields dynamically. The workflow improves accuracy, saves time, and makes membership management

more efficient. Therefore, Zoho Creator workflows provide an effective way to automate business processes and enhance the functionality of low-code applications.
