Integration in Zoho Creator

Aim

To integrate Zoho Creator with external applications and services to enable data sharing, automate business processes, and improve the functionality of the Gym Membership Management System.

Procedure

1. Log in to the Zoho Creator platform using valid credentials.
2. Open the existing Gym Membership Management System application.
3. Identify the external application or service to be integrated, such as Zoho CRM, Zoho Books, or an email service.
4. Navigate to the Connections or Integrations settings available in Zoho Creator.
5. Select the required service and configure the connection by providing the necessary authentication and permissions.
6. Create a workflow in the application to trigger the integration when a new membership record is submitted.
7. Use Deluge scripting to execute the required integration action, such as sending an email confirmation to a newly registered gym member.

8. Configure the recipient, subject, and message content using the appropriate form fields.
9. Save the workflow and test the integration by submitting a sample membership record.
10. Verify that the external service receives the data or performs the requested action successfully.

Deluge Code

The following example sends a membership confirmation email when a new member registers.

Assumed field link names: Member_Name and Email.

```
sendmail
[
    from : zoho.adminuserid
    to : input.Email
    subject : "Gym Membership Confirmation"
    message : "Dear " + input.Member_Name + ", your gym membership registration was successful. Welcome to our gym!"
]
```

Note: Replace Member_Name and Email with the actual field link names in your form. Configure the workflow on the appropriate form event and ensure that email sending is permitted in your Zoho Creator account.

Result

Thus, integration was implemented in Zoho Creator using workflow automation and Deluge scripting. The application can communicate with external services to perform actions such as sending membership confirmation emails. This reduces manual work, improves communication with gym members, and makes the business application more efficient.

Integration in Zoho Creator provides a flexible way to connect different applications, exchange information, and automate business operations
