Using Zia in Zoho Creator

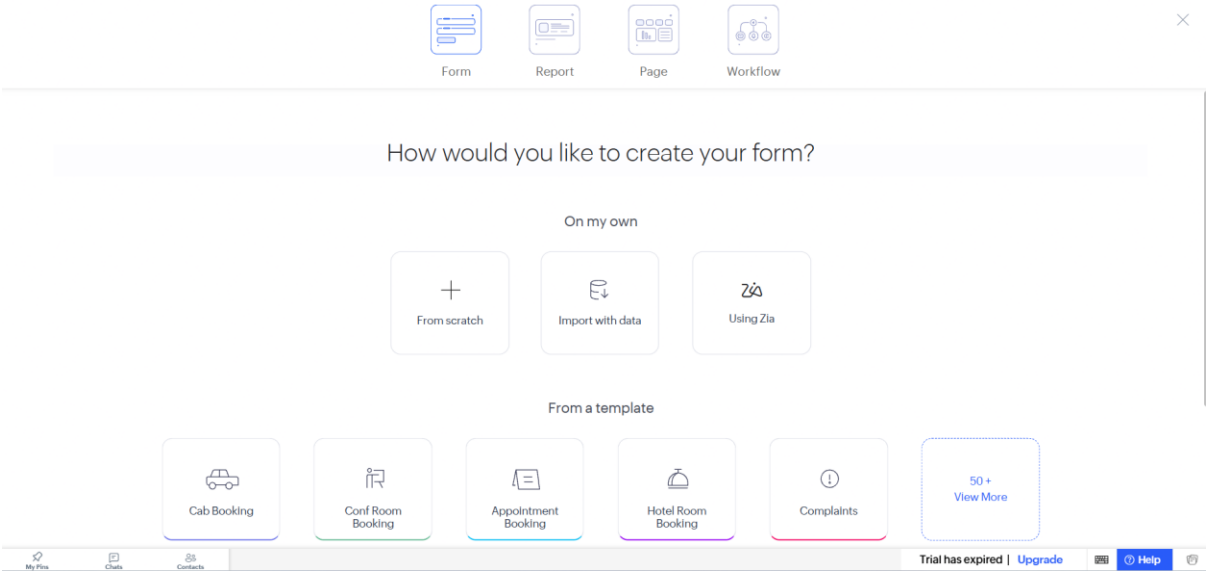

Aim

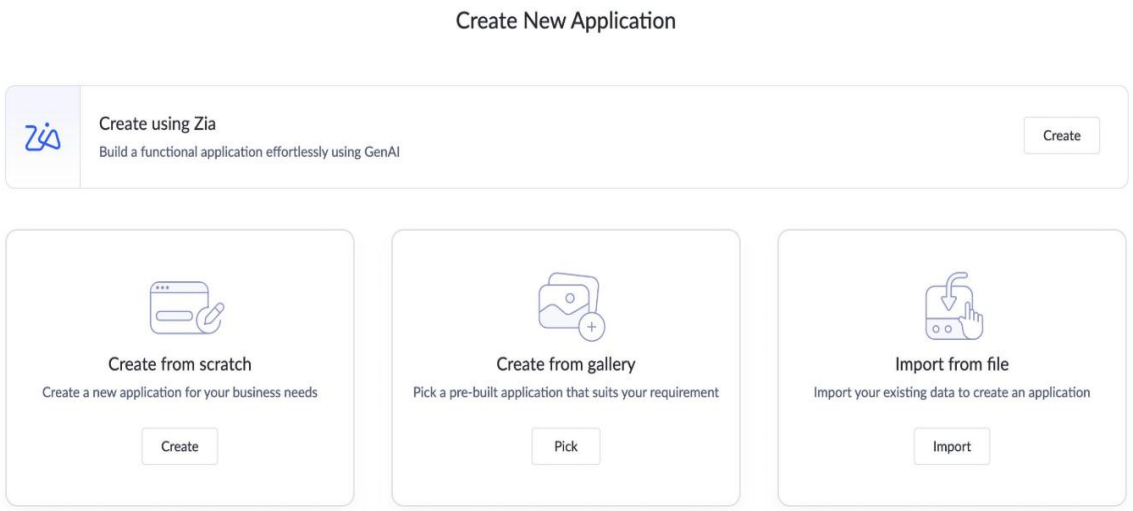

To explore and use Zia, the AI-powered assistant in Zoho Creator, to simplify application development and improve the management and analysis of data in the Rainwater Harvesting Record System.

Procedure

1. Log in to Zoho Creator and open the Rainwater Harvesting Record System application.
2. Navigate to the application workspace and explore the available AI or Zia-related features.
3. Check whether Zia is available in the application builder or relevant settings.
4. If an AI-assisted application-building option is available, enter a prompt describing the required feature, such as generating a form to record rainfall details.
5. Review the suggested form structure or configuration.
6. If AI-assisted data analysis is available, explore the options for understanding rainfall records, storage tank levels, or water usage.
7. Review the generated suggestions and make any necessary corrections.
8. Save the changes, if applicable, and verify the resulting form, report, or feature.

OUTPUT

Result

The Zia-related AI features available in Zoho Creator were explored to understand how artificial intelligence can assist with application development and data management. The experiment provided an overview of how AI-assisted features may help simplify form creation, application configuration, and data analysis.
